Summary

Senior Full Stack Developer with 5+ years of experience building and optimizing scalable web applications, AI-powered automation tools, and customer facing products. Experienced in modern React ecosystems, Next.js, TypeScript, Node.js, PostgreSQL, and designing production-ready frontend architectures with a strong focus on performance, accessibility, developer experience, and end-to-end type safety.

Professional Experience

Software Developer

Codemancers, Bangaluru, IN | October 2021 - February 2026

- **Slack Bot**: Designed and built a Slack based standup automation platform with an audit dashboard using **Next.js**, **TypeScript**, **Express**, **Prisma**, **Clerk**, and **Slack Bolt**. Established a reusable design system, end to end type safety, monorepo architecture, and **Playwright E2E** testing, improving developer productivity and release reliability.
- **Legacy Platform Modernization**: Modernized a large production platform by migrating from Gatsby to Next.js and TypeScript. Improved SEO, reduced duplicate data fetching, increased CMS flexibility through Strapi integration, implemented end-to-end type safety, and optimized rendering performance using memoization and caching.
- **Customer Experience Enhancements**: Developed add-on features using **ReactJs, RadixUI, TailwindCSS**. Optimized with **lazy loading/code splitting**. Added tests for reliability with **Jest, Playwright, and React Testing Library**.
- **Points Based Redemption System**: Developed a points based rewards platform with **React**, **Express**, and **PostgreSQL**, enabling seamless customer redemption workflows while ensuring application reliability through comprehensive **Jest** and **SuperTest** coverage.
- **AI Sales Automation**: Built backend APIs powering AI driven sales workflows and CRM integrations with **Salesforce** and **HubSpot**, enabling automated lead enrichment, insight generation, and pipeline optimization.
- **Leadership & Collaboration**: Led a team of three engineers, conducted code reviews, mentored junior developers, collaborated with product managers and cross-functional teams, and drove technical discussions for feature planning and architecture decisions.

Software Developer

CXDeployer, Bengaluru, IN | August 2021 - September 2021

- **Customer Journey Board**: Developed customer journey visualization and Kanban management interfaces using **React** and **Redux Toolkit**, with dynamic form validation powered by **React Hook Form**.
- **User Authentication**: Implemented user authentication in backend with **JWT technique using ExpressJS** and **MongoDB**. Also implemented user auth, sessions in the frontend with **React, Redux, Local Storage, Session Storage and Cookies**.
- **UX improvements**: Made sure errors and validation messages are clearly shown during any failure of the application.

Technical Skills

- **Frontend**: React, Next.js, Gatsby, TypeScript, JavaScript, HTML5, CSS3, Tailwind, Headless UI, Tanstack Query, Redux, Zustand, Jotai, tRPC
- **Backend**: Node.js, Express.js, Next.js API Routes, REST APIs, tRPC, oRPC, Prisma
- **Databases**: PostgreSQL, Prisma ORM, Drizzle ORM
- **Tools**: Salesforce, HubSpot, Slack Bolt, Bull.js, Strapi CMS, Git, Netlify
- **Testing**: Jest, React Testing Library, Playwright, Vitest
- **Other**: AI/ML Integration, Automation, Performance Optimization, AWS EC2, AWS S3

Projects

Tutor OS

Multi-tenant SaaS for Tuition & Coaching Centers | tutor-os-xi.vercel.app | GitHub

- Architected a multi-tenant platform using Next.js 16 (App Router, React 19), TypeScript, oRPC, and Prisma 7 over PostgreSQL (Neon), achieving end to end type safety from database to UI with no hand written API types or fetch clients.
- Implemented organization based multi-tenancy and RBAC (owner/admin vs. student) via Clerk, enforced at both the page and RPC layers, with role branched routing that reuses shared routes/components across roles.
- Built a fee management system with dues computed on the fly (never materialized) to keep owner and student views consistent, and integrated Razorpay for online payments with signature verified webhooks.
- Designed attendance tracking, session logging, exam grading, and role specific KPI dashboards with trend charts (Recharts), plus a notes system with file attachments via UploadThing.
- Adopted a server first architecture using React Server Components, server only auth guards, and query prefetching for performance.

Education

B.Tech in Computer Science Engineering - Adamas University, Kolkata (2021)
